

Crazy Whale IRL card game

How open source gave life to a real physical game

Note : all designs are under creative commons non commercial license (CC BY-NC 3.0)

Intro -- What is this talk about

- genesis of an **open-source** project
- **golang** Terminal User interface game
- **python** machine learning usage example
- **WebGL** 3D audio sampler

Intro -- About me

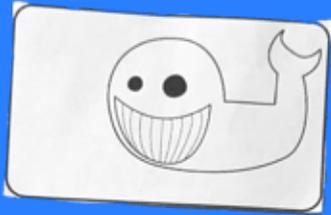

- Pierre Malhaire
- <https://github.com/pmalhaire>
- 8th fosedem and 1st as speaker
- Lead dev C++/golang/React
-  Stereolabs [We are hiring](#)
- 3D vision and depth sensing

Birth -- How it happend

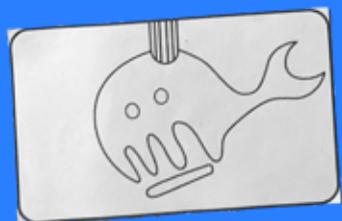

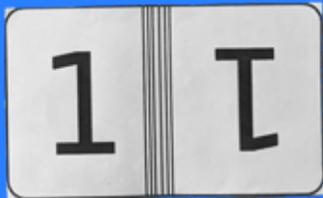

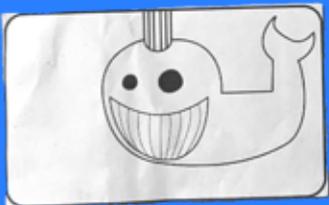

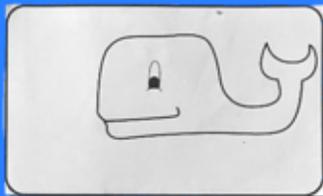

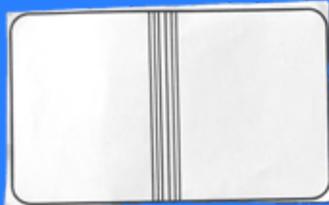

- Drawing in an island
- A formidable smile
- A set of drawings

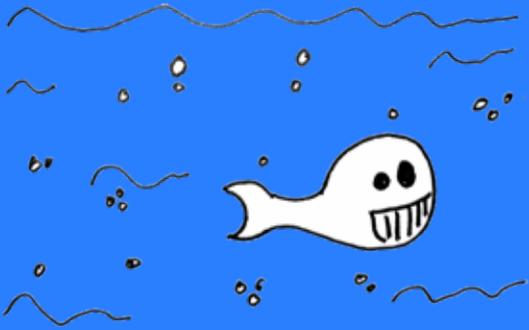

Birth -- The first draft

- Printed in a basic printer
- Half cards where not finished
- But it worked !

Explore -- Make it nerd

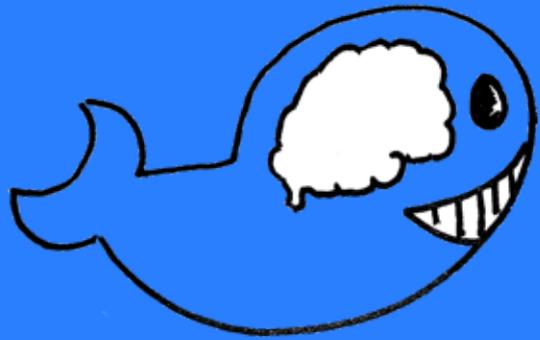

- bubble tea in golang weekly
- I love TUI

Explore -- TUI

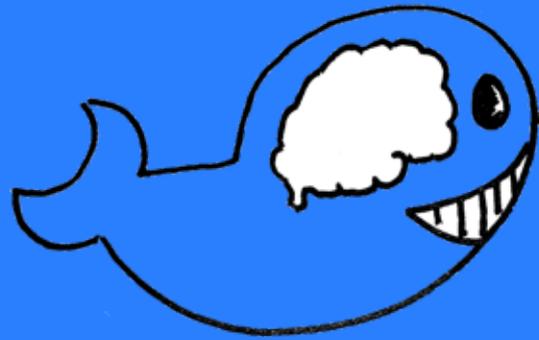

<< code demo >>

Think -- Machine Learning is nice ?

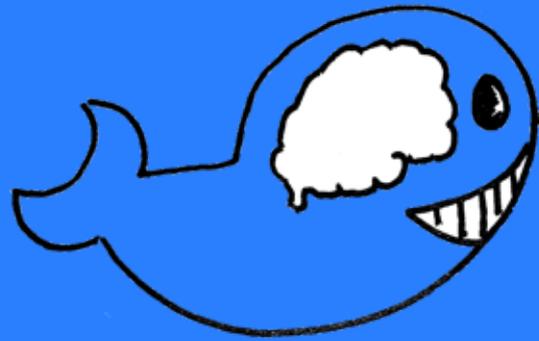

- Tensor Flow
- DQN model
- Could it help ?

Think -- Thierry to the help

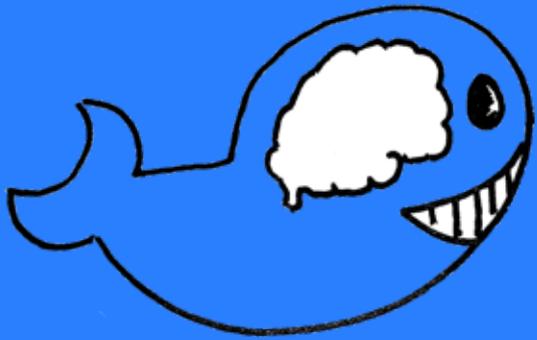

- RICards
<https://github.com/datamlab/rlcard>
- Models for classical Games
- Let's do it

Think -- Why Machine Learning ?

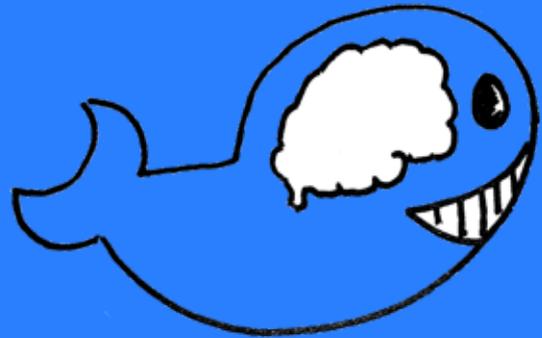

- Balancing the rules
- Games are too long
- Games can be infinite
- Unit test rules

Think -- whale-ml

<< code demo >>

Think -- What I learned

- Number of cards is important for convergence
- Card repartition controls randomness vs strategy
- ML can't simulate human

Dive -- Curiosity leads you everywhere

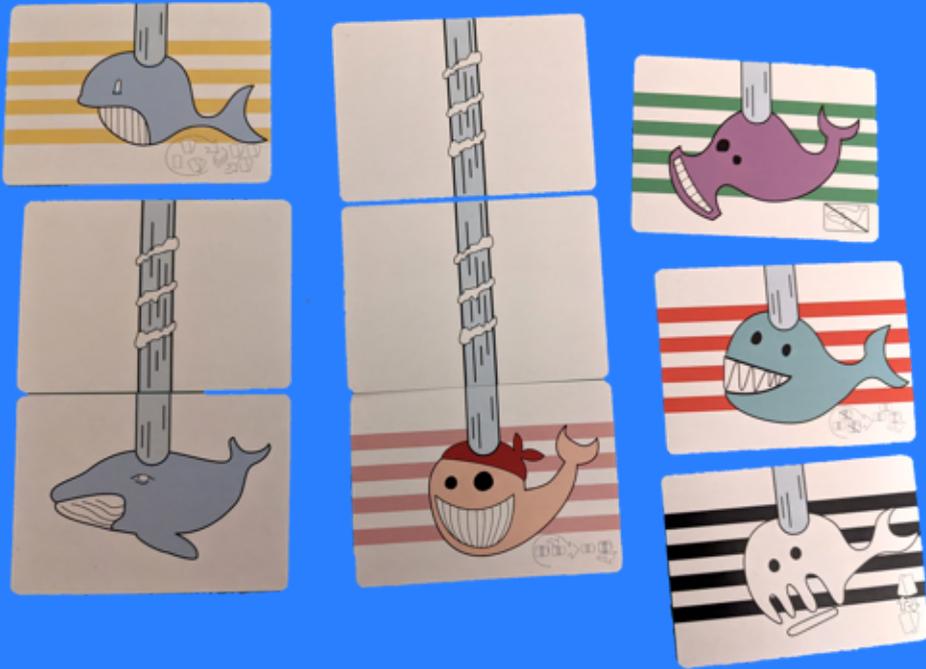

- WebGL (special thanks to Martin Renou)
- Simulating water : caustics ?
- Sampling real whale sound

Dive -- Let's them sing

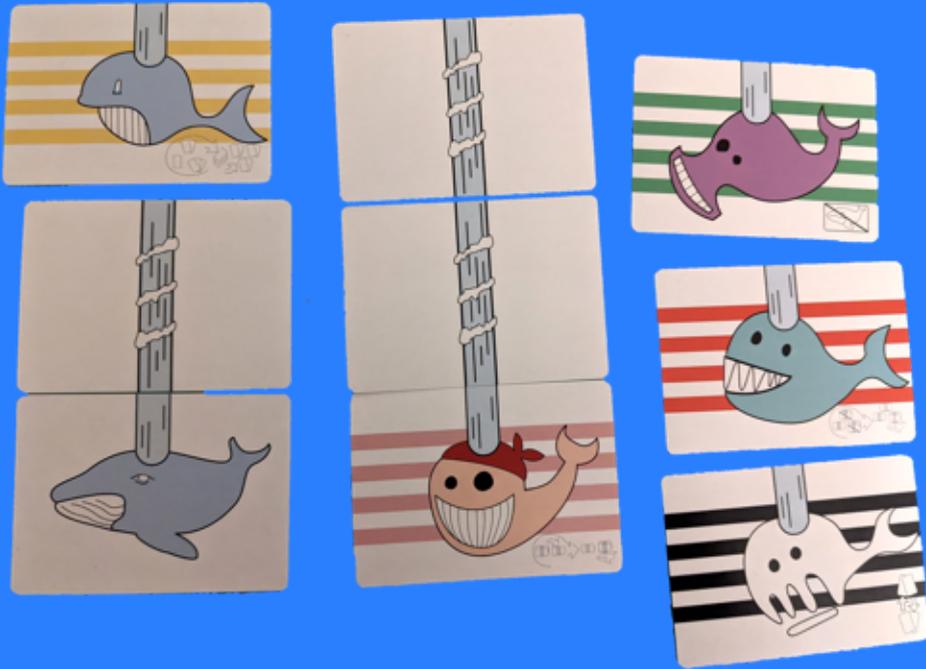

[WebGL sampler](#)

Swim in the sea -- The result

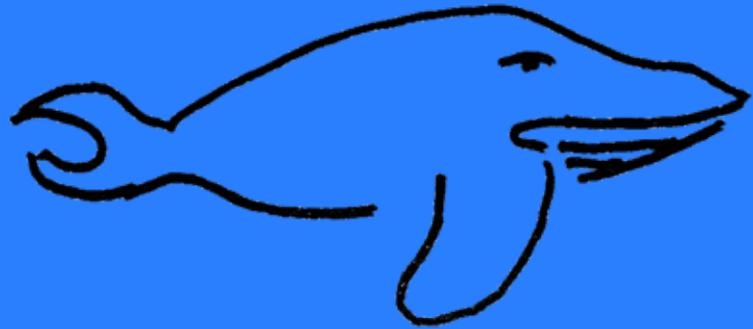

- physical printed game (4th)
- 3 github repos
- 10 games sold

Swim in the sea -- go further

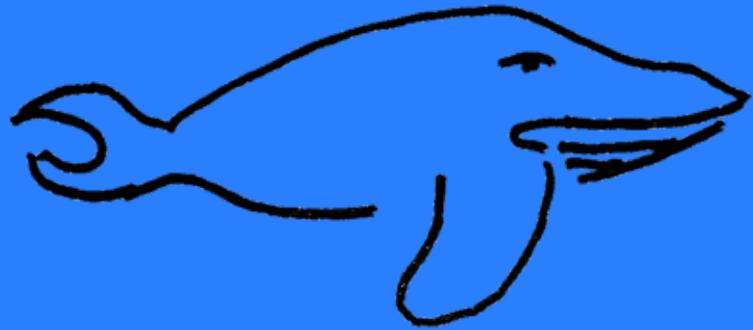

- print 100 physical games
- improve the code
- know more on whales

Hope -- helping whales

- Make this meaningful it's FOSS
- Donate for the whales to [Miraceti](#)
- You'd like to buy one mail me :
 - jeubaleine@gmail.com
 - subject:Crazy Whale Game
 - all benefits will go to NGOs
- [Video about whales \(french\)](#).

Thank you !

Contributions are welcome !
