

PipeWire

Wim Taymans

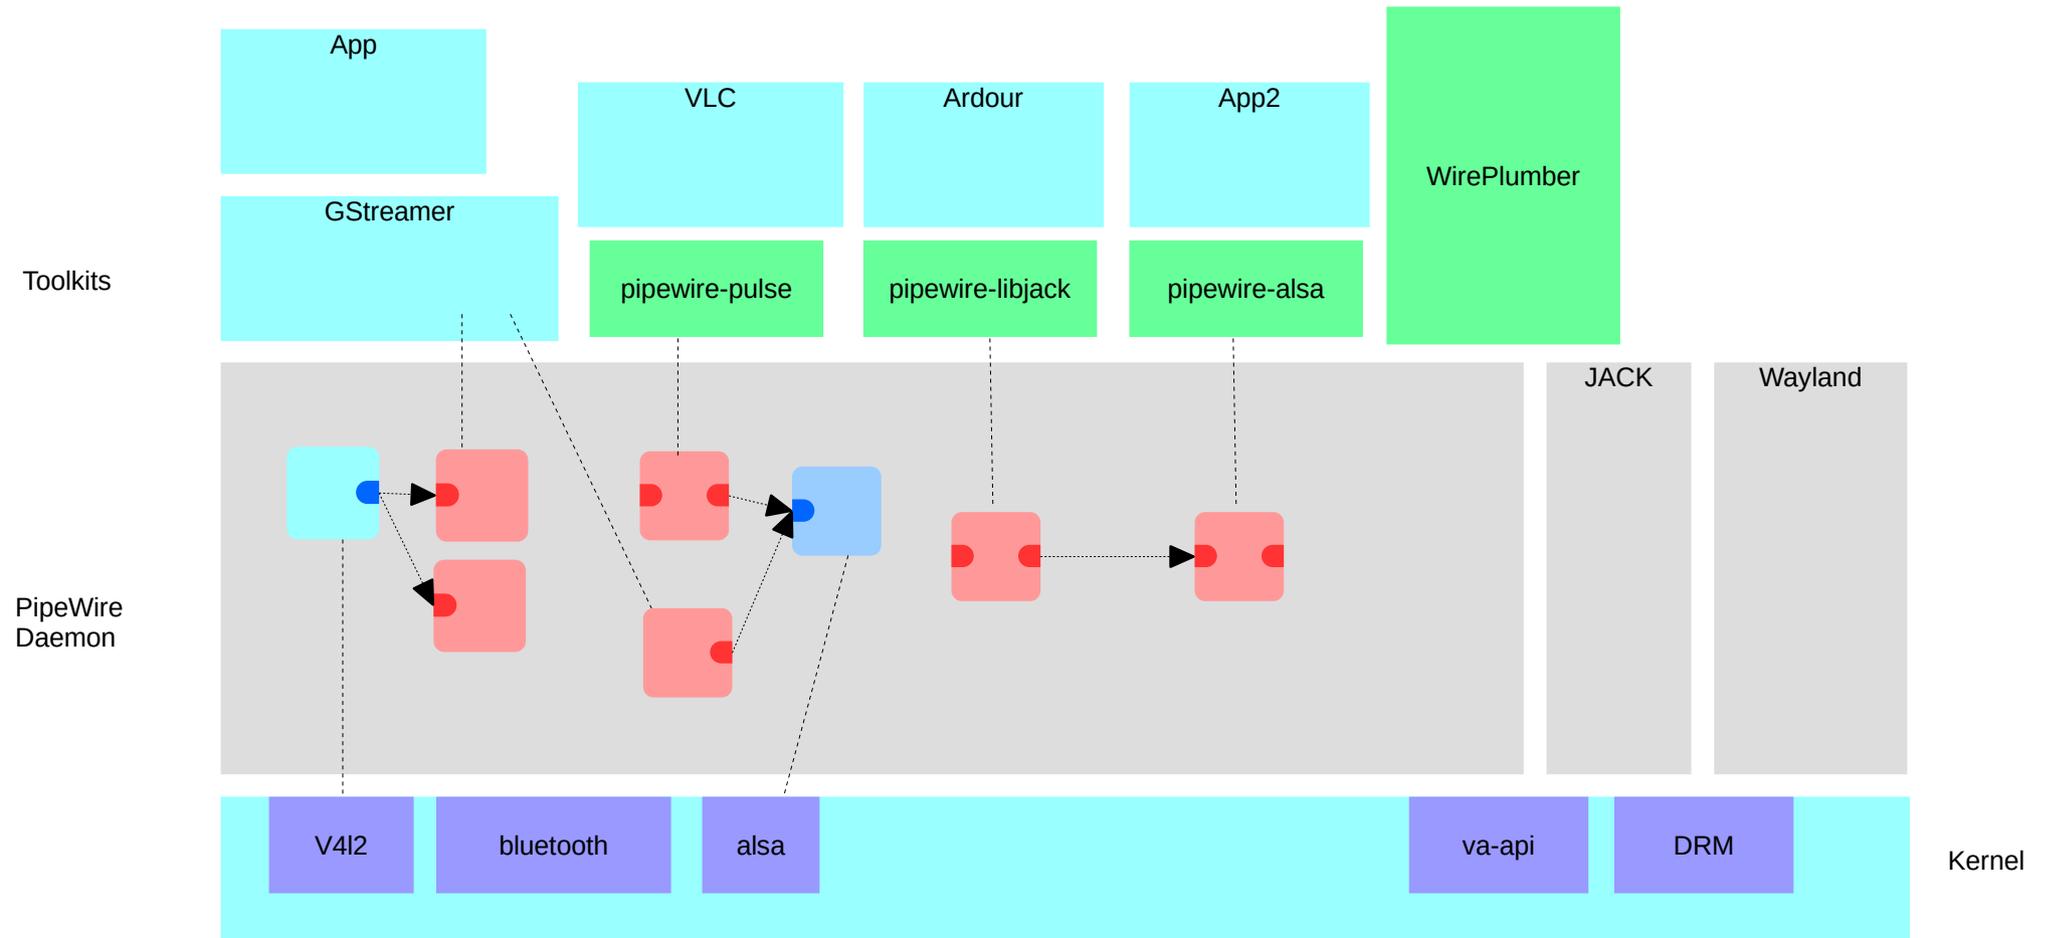

Principal Software Engineer

FOSDEM 2023

What is PipeWire

Multimedia sharing and processing engine

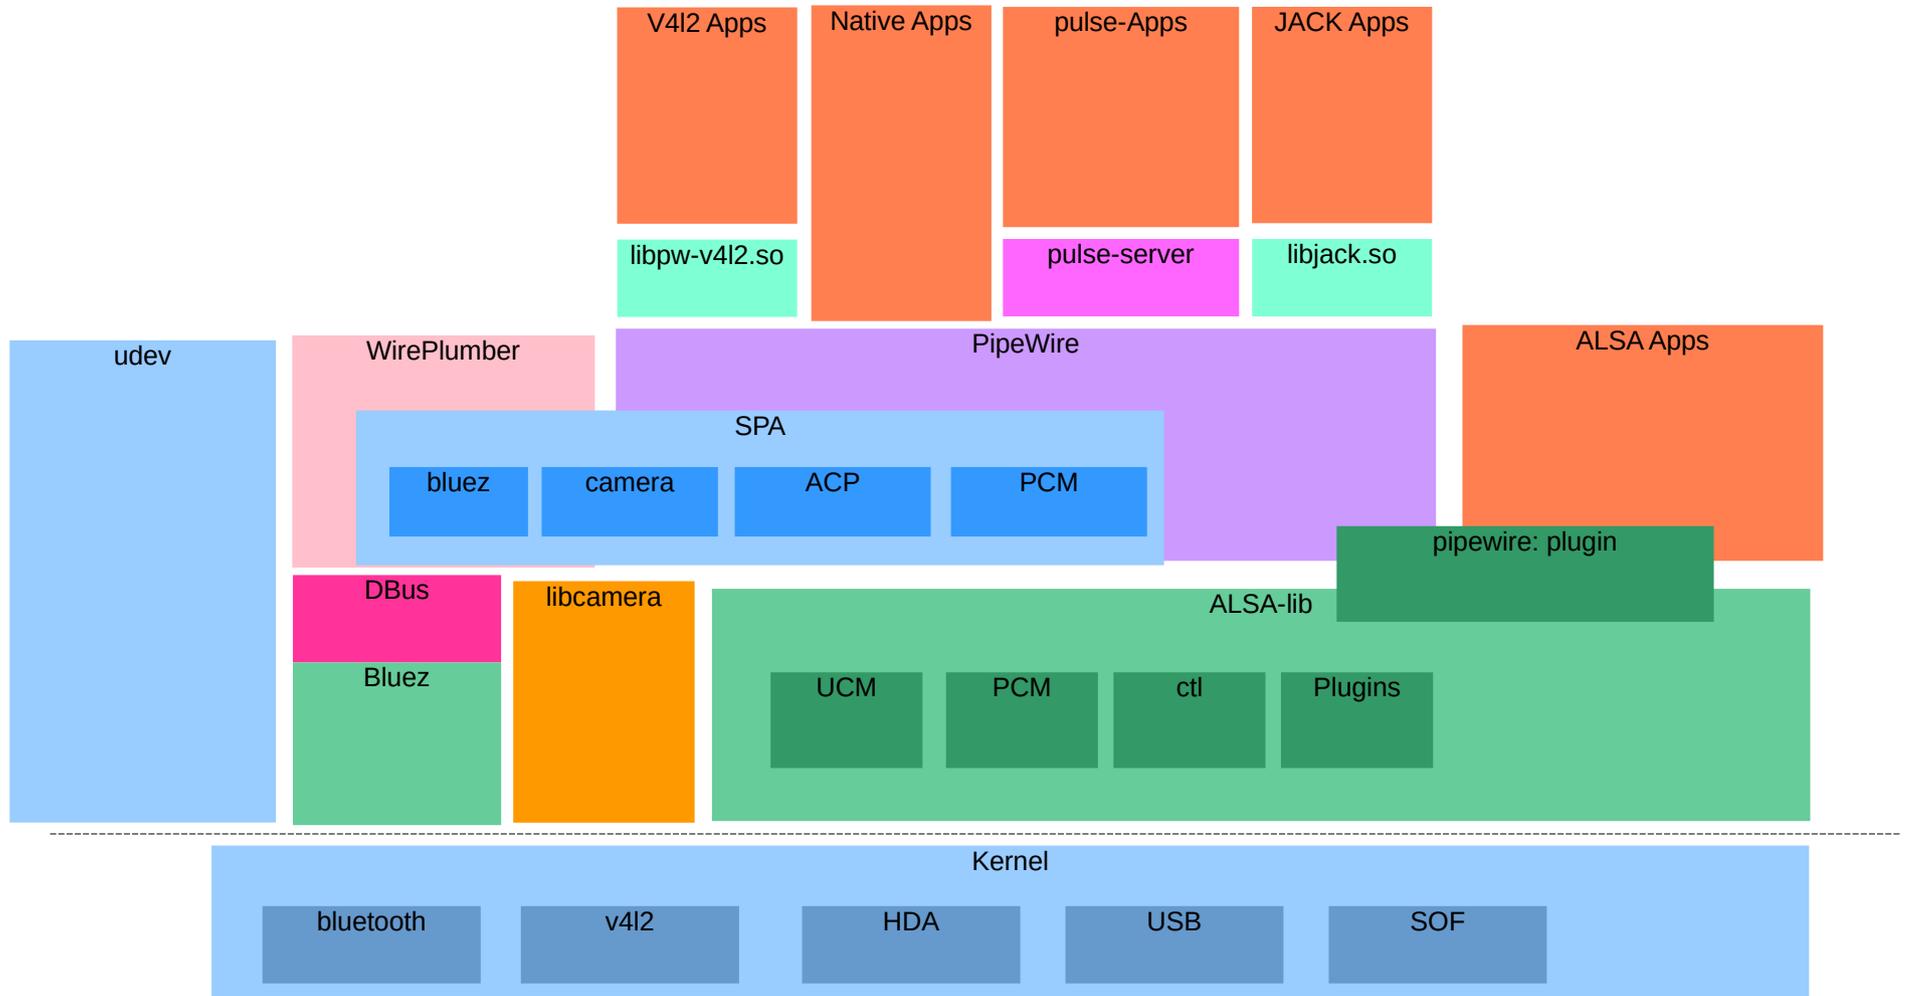

PipeWire

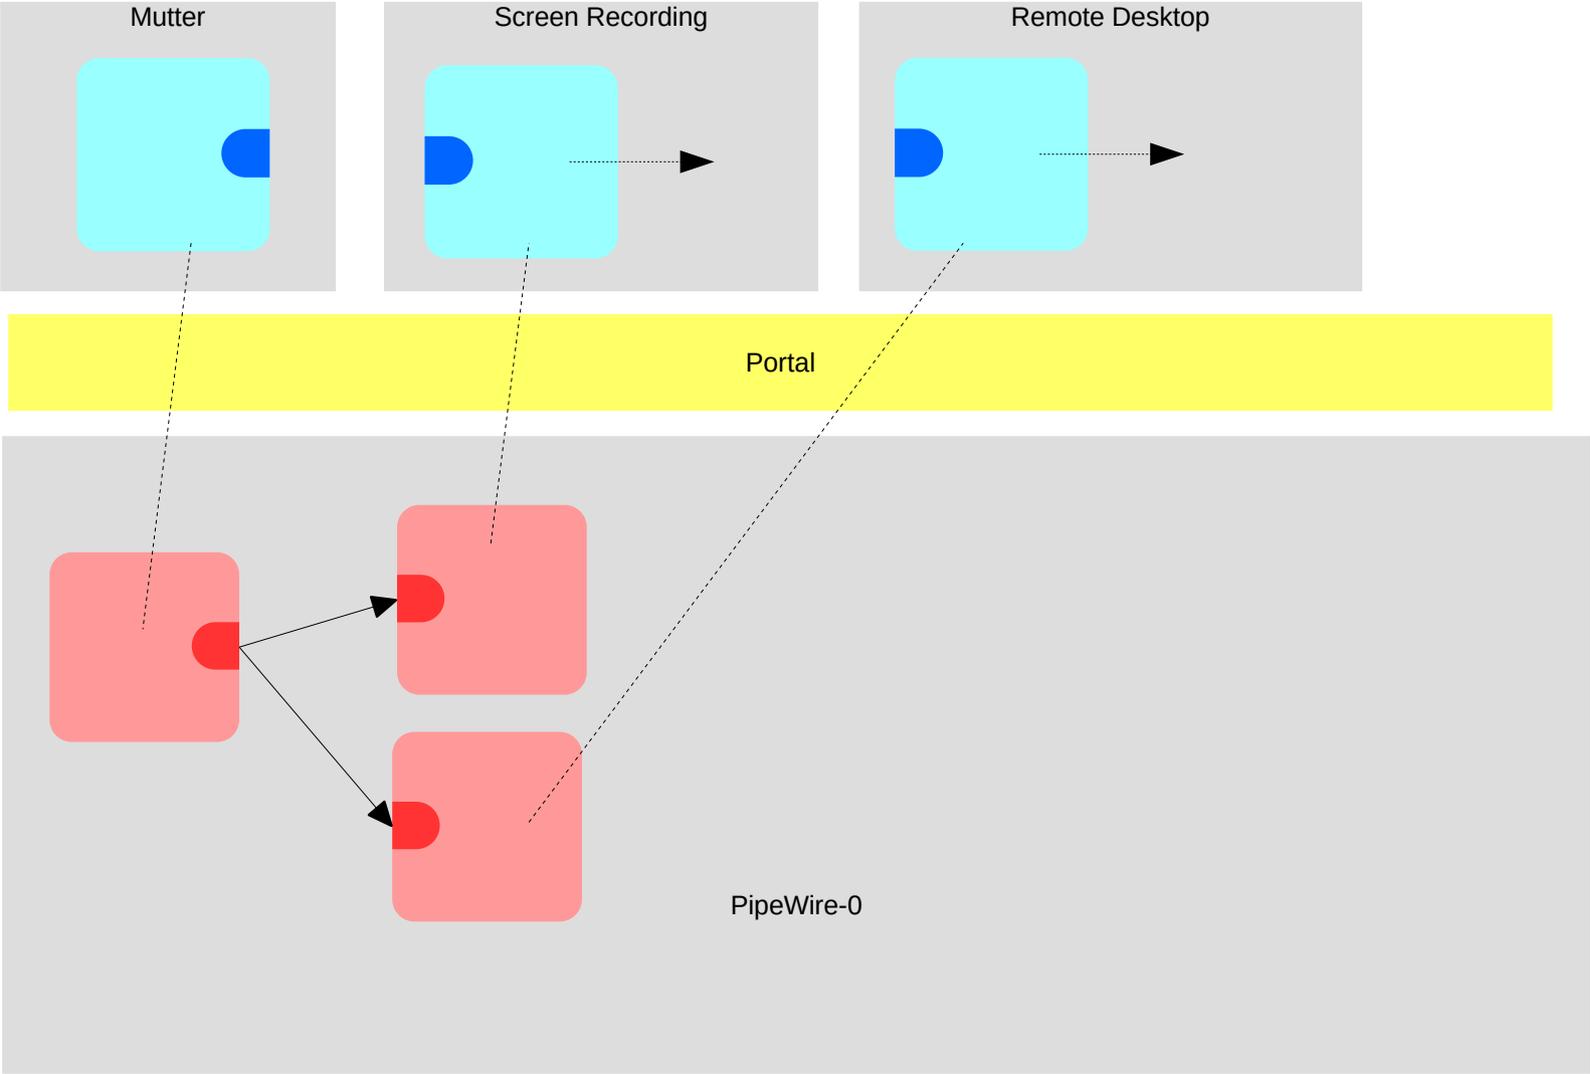

Features

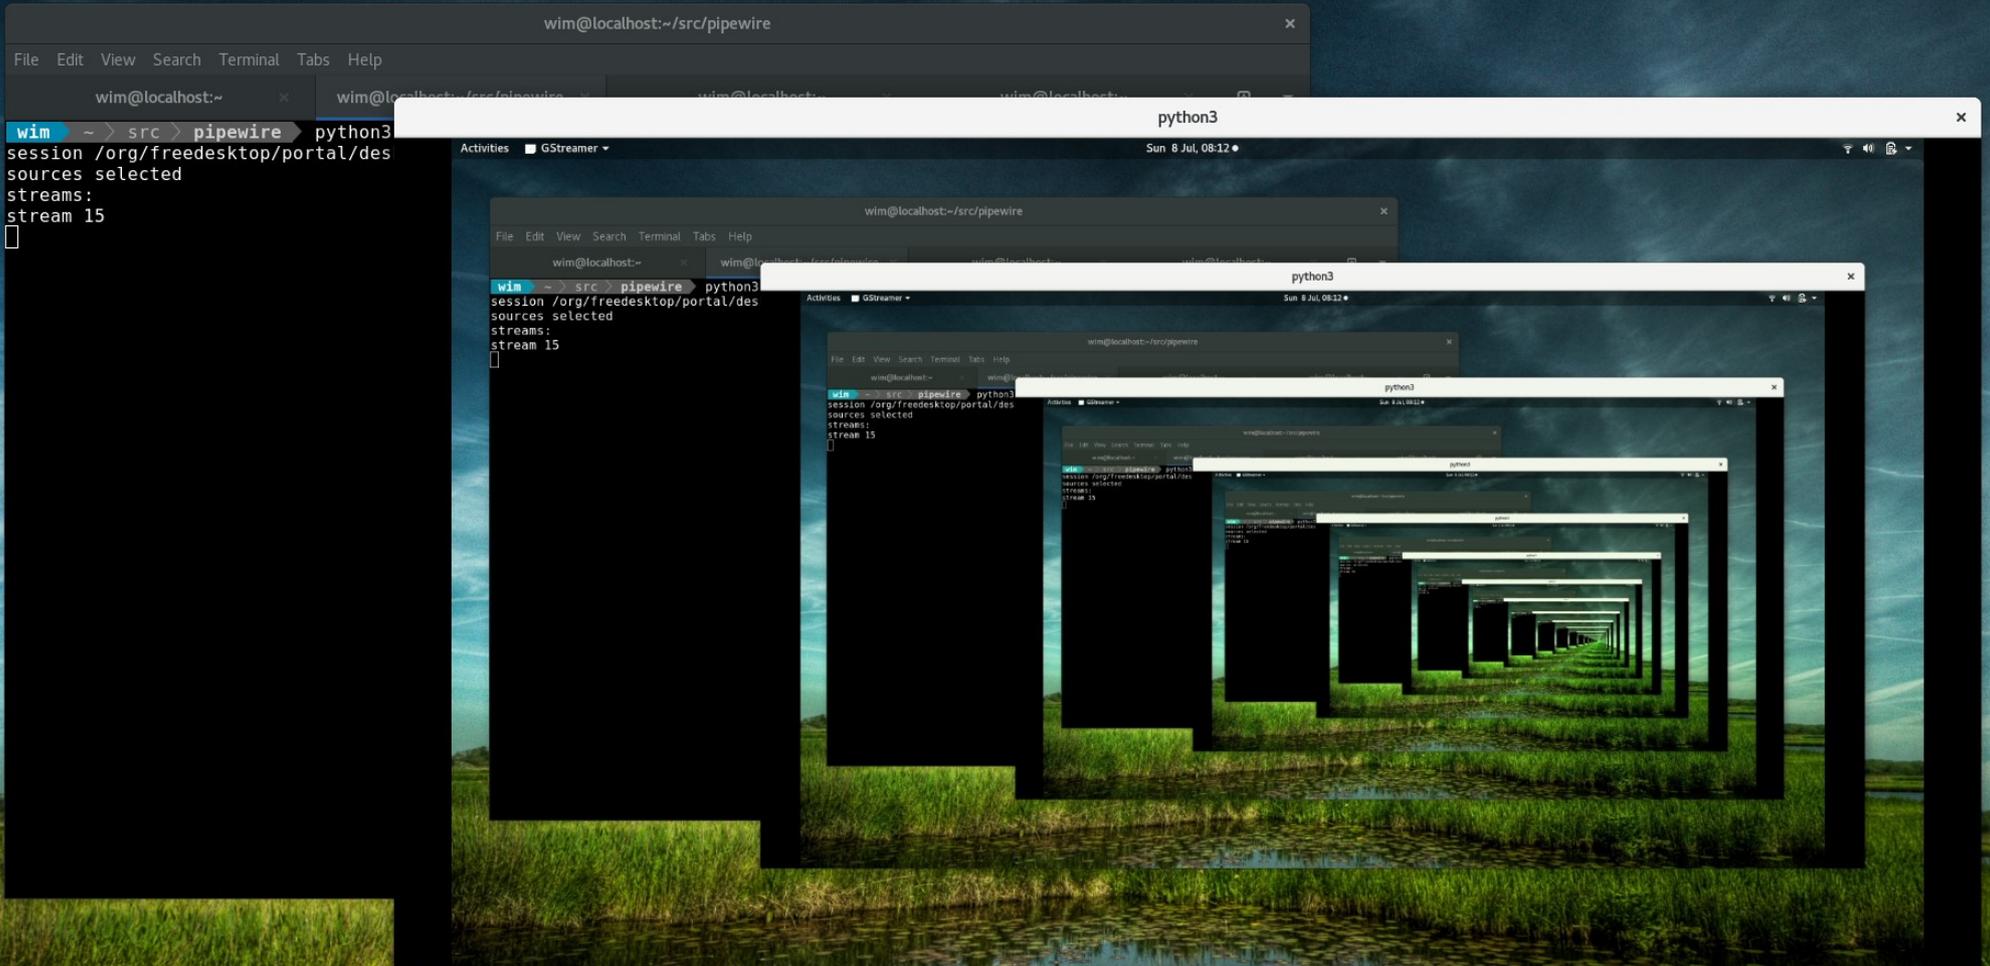

- Exchange media with devices and other apps
 - Zero copy, shared memory, memfd, dmabuf, eventfd
- Security per application
 - Visible objects (R), methods (WX), metadata (M)..
- RT capable, low latency (<1.5ms), JACK-like scheduler reduced context switches. Similar performance.
- All media types + generic control streams
- Extensible: types, protocol, ...
- External session manager implements policy

Overview

Wayland screen sharing

Audio Support

- Pro Audio model like JACK is chosen
 - 1 format (float32) Channels are split into mono streams
 - 1 buffer size (but is dynamic in PipeWire)
 - Sinks/Sources are wrapped with an audio adapter in front to mix, merge, resample, split and convert the channels
 - Multiple devices, Automatic clock slaving when joined, like zita-ajbridge
 - Midi in generic control stream. Exposes ports and devices like a2jmidid

Audio Support (PipeWire specific)

- Uses timer based scheduling
 - Like PulseAudio (but using a much more accurate timing model)
 - IRQ based scheduling also possible but not yet implemented
 - Can dynamically change buffer size (and thus latency)
- Uses ACP (copy of PulseAudio card profiles), UCM devices, profiles, ports, soft/hw volumes, jack detection, It supports ALSA API and UCM profiles.
- Highly optimized audio processing paths.
- A hybrid between JACK and PulseAudio.

Status

- API/ABI stable since Fedora 32 (February 2020)
- Default in Fedora 34 (February 2021)
 - <https://fedoraproject.org/wiki/Changes/DefaultPipeWire>
- Mostly feature parity for JACK and PulseAudio
 - Except for netjack1/2 (but alternatives exist)
 - Except for pulse DBus/DLNA modules
- Other distros already have or are switching from PulseAudio

Current focus

- Bugfixing
- Work more on Video side of things (Video routing, vulkan processing filters, ...)
- Fix up the camera elements
- WirePlumber/Portal Camera improvements
- OBS studio as a testcase
 - Camera/Screen capture with PipeWire
- Firefox/Chrome PipeWire/Portal camera support via patches to WebRTC.
