

# co-op cloud

@DECENTRAL1SE | COOPCLOUD.TECH | ENTERPRISE SLIDES  
<https://www.are.na/trav-fryer/internet-gardening>

a software stack that aims to  
make hosting libre software  
applications simple for small  
service providers such as tech  
co-ops who are looking to  
standardise around an open,  
transparent and scalable  
infrastructure

**TIME

# RECIPES

 `compose.forgejo.yml`

 `compose.mariadb.yml`

 `compose.postgres.yml`

 `compose.smtp.yml`

 `compose.yml`

The screenshot shows the Gitea web interface for the repository `coop-cloud/gitea`. At the top, there are navigation links for Code, Issues (2), Pull Requests (1), Releases, Wiki, and Activity. Below this, the repository is described as "A painless self-hosted Git service". The main section shows the repository's statistics: 156 Commits, 3 Branches, 11 Tags, and 1.3 M (likely MB) of size. The current branch is `master`. A notification bar indicates a switch to the `thecoopcloud/stack-ssh-deploy` branch. The file list on the right shows various files and their commit messages, including `release`, `.drone.yml`, `.env.sample`, `.gitignore`, `LICENSE`, `README.md`, `abra.sh`, `app.ini.tmpl`, `compose.forgejo.yml`, `compose.mariadb.yml`, `compose.postgres.yml`, `compose.smtp.yml`, and `compose.yml`.
